

Karran sinks are revolutionizing the sink industry!

This is what Carlos Rodriguez of CCR Architects had to say about his experience with the Karran sinks on the PPA Project.

**“Found the application of the Karran stainless steel sinks in a commercial office environment to be most effective in achieving aesthetic, functional and sanitary goals. Having stainless steel fused on-to solid surface and plastic laminated materials provides great design opportunities for wet areas. The seamless edge feature gives an undermount sink installation a fresh and clean look”.**

The Edge stainless steel sink can be integrated seamlessly into solid surface and laminate countertops, giving you a one piece appearance with ultimate durability and ease of maintenance.

**Project location:** Philadelphia Parking Authority

Philadelphia, PA

**Architect:**
